

ABSTRACT OF THE DISCLOSURE

A piston-type accumulator, with an axially movable piston (8) in a housing bore (5), includes a seal (4) interposed between the piston (8) and the housing bore (5), which is fixed inside the housing bore (5), and a cover (6) for closing the housing bore (5). The housing bore (5) is designed as a stepped bore enlarged in diameter in the direction of the cover (6) for the simple accommodation of the seal (4).
